

Exercise 0

Software

The lab has been done on **macOS Mojave 10.14.6**.

Every codes were written and tested on **Visual Studio Code 1.62.2**.

Exceptions

Exercise 1 - strace was done on a Linux machine running **Ubuntu 20.4**.

Exercise 3 - Google Pub/Sub was completely done and working on my **Macbook**. However as a way to check if everything was running properly without the Google account active, I used **Unbuntu 20.4**. It worked.

How to run this lab

There is a `README` file for almost each exercice explaining how the code should work. For further information, it may be found in the actual code as comments.
